Task 1: Primary AAC Board & Symbol Grid System

- **Goal:** Design an accessible, low-friction communication board layout optimized for tablet and mobile touchscreens.
- **Key Elements to Include:**
    - **Visual Phrase Strip (Top):** Slot container displaying selected picture symbols sequentially, complete with clear action buttons: **Speak (Play)**, **Backspace**, and **Clear All**.
    - **Dynamic Top-5 Prediction Bar:** A high-visibility horizontal strip directly above the grid that highlights the top 5 predicted next words. Must look visually distinct from the main grid.
    - **Main Vocabulary Board:** A clean grid layout with large touch targets. Icons must feature a clear picture illustration with the text label positioned below it.
    - **Global Controls Bar:** Compact top navigation bar containing the **Tagalog / English Toggle Switch** and a subtle **Caregiver Settings Button**.

Task 2: Responsive Age-Adaptive Grid Layouts

- **Goal:** Create three visual density presets that adjust automatically based on user age profiles.
- **Grid Layout Presets:**
    - **Early Childhood (Ages 3–8):** 2 x 3 or 3 x 3 grid (large icons, minimal visual clutter).
    - **Youth / Adolescents (Ages 9–17):** 3 x 4 or 4 x 5 grid.
    - **Adults (Ages 18+):**4 x 6 or 5 x 6 grid (compact icons for dense vocabulary).

Task 3: PIN Security Overlay & Caregiver Portal

- **Goal:** Design the administrative dashboard interface to feel separate from the primary AAC board while keeping navigation simple for parents and teachers.
- **Key Screens to Design:**
    - **PIN Keypad Modal:** Simple 4-digit security numpad overlay to prevent accidental access by non-verbal users.
    - **Age & Profile Settings Screen:** Controls for selecting age groups and setting initial grid density defaults.
    - **Custom Vocabulary Uploader:** Simple form interface to upload a new image, enter Tagalog/English labels, assign a category, and save to the local board.
    - **Geofence & Location Context Manager:** Visual map selector or drop-down list to configure GPS locations (*e.g., Home, School, Therapy Clinic*) and time-of-day routine rules.

Task 4: Design System & Visual Assets

- **Goal:** Establish consistent typography, colors, and asset guidelines.
- **Deliverables:**
    - **Color Palette:** Accessible, high-contrast color scheme (friendly and clear, avoiding overly child-like themes for adult users).
    - **Typography:** Clear, highly legible sans-serif font

- **Symbol Style Guide:** Guidelines for picture communication symbols (consistent line thickness, flat illustrations, and neutral backgrounds).
